

# Exploring New Media in the Sahel

In 2015, Equal Access, the media partner on USAID's Peace Through Development II (PDev II) project, undertook a new media survey to evaluate the relevance of new media interventions in Burkina Faso, Chad and Niger. A total of 1,500 surveys, 500 per country, were conducted in local languages in the 'capital cities' of each province of project intervention zones. Due to the urban nature of the survey, the results summarized below have an urban bias, and are not necessarily representative of rural areas where network strength and media penetration may vary. Nonetheless, results demonstrate that new media holds tremendous potential for development initiatives targeting urban audiences in the Sahel.

## MOBILE

Mobile users regularly use SMS:

**89%** own a mobile phone

An additional **8%** have access to a mobile phone through a family member

**97%** of respondents have access to a mobile phone

**61%** of mobile users say they regularly use their mobiles to transfer files via Bluetooth

**21%** of Nigeriens own a smartphone, most of them Androids

## INTERNET

**44%** of Chadians have internet access

**40%** of Nigeriens have internet access

**30%** of Burkinabe have internet access

**38%** of respondents have access to the internet

**66%** of users access the web via smartphone on a daily basis

- Youth under 35 are **more likely** than adults to have internet access (51% vs. 24%)
- Men have **more access** than women (50% vs. 24%)
- Youth users are **more likely** than adult users to access the web through mobile phones (91% vs. 76%)

## SOCIAL MEDIA

**85%** of Internet Users use some form of social media

Facebook - 92%

WhatsApp - 33%  
(58% in Niger)

YouTube - 22%

Twitter - 21%

Of those on social media, **75%** visit networks weekly, and **50%** of users access social media on a daily basis

## RADIO and TELEVISION

More than 2/3 of respondents listen to radio on a weekly basis

Just under 2/3 of respondents watch television on a weekly basis

On a daily basis, women are **more likely than men to watch TV (52% vs. 46%)** and **less likely than men to listen to the radio (47% vs. 58%)**

**49%** of internet users familiar with PDevII are interested in interacting with project radio programs via social media
